

FlowGuard — 用户手册 / User Guide

FlowGuard 是一款纯软件决策支持工具：付款前合规与退回风险筛查、多持牌通道智能比价选路、结算链路透明追踪。它不持牌、不经手/托管资金、不做任何加密货币兑换或转账；所有资金结算由持牌金融机构完成。

>

FlowGuard is a software-only decision-support tool: pre-payment compliance & return-risk screening, multi-rail routing across licensed institutions, and transparent settlement tracking. It holds no licence, never touches or custodies funds, and performs no crypto exchange or transfer — all settlement is done by licensed financial institutions.

版本 / Version: 1.0 • 语言 / Locales: 简体中文 • English

1. 快速开始 / Getting started

1. 打开应用，进入首页(付款控制台)。 / Open the app to the Home (payment console).
2. 顶部/底部导航：首页、付款、收款人、审批、工单、历史。 / Navigation: Home • Pay • Payees • Review • Cases • History.
3. 语言：应用支持英文与中文，首选语言为英文，可随时切换。 / The app supports English and 中文, English-first, switchable anytime.
4. 每笔业务的最终动作是生成一条付款指令并提交给持牌机构——平台本身不划付资金。 / Every flow ends by generating a payment instruction submitted to a licensed institution — the platform never moves funds itself.

2. 核心流程 / Core workflow

完整闭环 / Full loop:

发起草稿 → 退回风险预检 → 供应商核实(可选) → 双人审批 → 生成付款指令(提交持牌机构) → 记录结算凭证 → 收款方到账确认 → 对账

2.1 新建付款指令 / New payment instruction

- 首页点击「新建付款指令 / New payment instruction」。 / Tap New payment instruction on Home.
- 选择收款人、填写金额与结算币种；可设通道偏好(自动推荐 / 稳定币直连 / 本地法币)。 / Pick a payee, enter amount and settlement currency; optionally set a channel preference (Auto / Stablecoin Direct / Local Fiat).
- 点击「运行预检 / Run pre-check」。 / Tap Run pre-check.

2.2 退回风险预检 / Return-risk pre-check

- 系统给出退回概率、命中的风险因子、可能的卡点。 / You get a return probability, hit risk factors, and the likely chokepoint.
- 若出现严重阻断项，会提示「暂缓提交 / Do not submit yet」——建议先解决或走供应商核实。 / Critical blockers show Do not submit yet — resolve them or verify with the supplier first.

- 数据质量类风险因子可一键「生成核实请求」，进入工单。/ Data-quality factors can be turned into a verification request (a Case) in one click.

2.3 选路 / Route

- 对比稳定币直连 vs 本地法币两条通道的费用、时效与退回率，选择结算路径。/ Compare Stablecoin Direct vs Local Fiat on fees, ETA and return rate, then choose the route.
- 数字资产结算由境外持牌机构完成并为收款人入账；平台仅比价与选路。/ Digital-asset settlement is completed by an overseas licensed institution; the platform only compares and routes.
- 确认后提交审批。/ Submit for approval.

2.4 双人审批(Maker-Checker) / Dual approval

- 出纳(Maker)提交的每笔指令，须由复核人(Checker) 第二签批准，不能自我批准(服务端强制)。/ Every instruction a Maker submits needs a second-signature approval from a Checker — self-approval is hard-blocked on the server.
- 高风险指令进入第二签通道；退回需填必填理由。/ High-risk items go to the second-signature lane; returning requires a mandatory reason.
- 批准 = 「批准并生成指令 / Approve & generate instruction」，全程写入审计记录。/ Approve = Approve & generate instruction, fully recorded in the audit trail.

2.5 执行(提交给持牌机构) / Execute (submit to institution)

- 面板显示：「将此指令提交给持牌机构，然后记录其结算凭证号」。/ The panel says: submit the instruction to the licensed institution, then record its settlement reference.
- 记录银行确认 / MT103 / 机构结算凭证号，可上传回单。/ Record the bank confirmation / MT103 / institution settlement reference; attach a slip.
- 点击「标记为已提交 / Mark as submitted」。持牌机构完成结算——本平台不经手资金。/ Tap Mark as submitted. The licensed institution completes settlement — the platform does not move funds.

2.6 收款方到账确认 / Payee arrival confirmation

- 在历史中生成「收款人到账确认链接」(免登录)，发送给收款人。/ From History, generate the login-free arrival-confirmation link and send it to the payee.
- 收款人到账后点击确认，回执记录到指令中。/ The payee confirms once funds arrive; the confirmation is recorded against the instruction.

2.7 对账 / Reconciliation

- 「对账」页比对应收 vs 实收、费用、汇兑损失，匹配到账凭证并可导出对账单。/ The Reconciliation screen compares expected vs received, fees, FX loss, matches arrival proofs, and exports a statement.
- 状态：未结 / 待对账 / 已对账。/ Statuses: Outstanding / To reconcile / Reconciled.

3. 各页面速查 / Screen reference

页面 / Screen	用途 / Purpose
首页 / Home	概览、统计、国家敞口、最近付款、新建付款指令
付款 / Pay	草稿 → 预检 → 选路，三步向导

页面 / Screen	用途 / Purpose
收款人 / Payees	收款人台账(SWIFT/IBAN、通道、退回率、失败历史)
审批 / Review	Maker-Checker 双人复核队列
工单 / Cases	供应商核实请求 + 失败案例库
历史 / History	只读付款指令台账、到账确认链接
对账 / Reconcile	应收/实收比对与对账单导出

4. AI 助手 / AI assistant

- 风险信号 / Risk signals: 捕捉语义矛盾、相似历史失败、可能缺失单据; 只加警示, 绝不降低评分。 / Catches semantic contradictions, similar past failures, likely-missing docs; only adds caution, never lowers the score.
- 合规简报 / Compliance briefing: 通俗解释与修复步骤。 / Plain-language explanation and fix steps.
- 核实消息起草 / Draft verification message: 向供应商起草求证消息。 / Drafts a request to the supplier.
- AI 输出仅供参考, 提交指令前请核实。 / AI output is advisory — verify before submitting the instruction.

5. 常见问题 / FAQ

- Q: FlowGuard 会帮我付款/打款吗? / Does FlowGuard pay or send money for me?
不会。平台只做风控、比价选路与生成付款指令; 资金由持牌机构划付。 / No. It only screens risk, routes, and generates the instruction; funds are disbursed by licensed institutions.
- Q: 为什么不能批准自己提交的付款? / Why can't I approve my own submission?
职责分离(Maker-Checker)要求由不同角色批准, 服务端已强制禁止自我批准。 / Segregation of duties requires a different role; self-approval is hard-blocked.
- Q: 到账确认链接需要收款人登录吗? / Does the arrival-confirmation link require login?
不需要, 是免登录的不可猜测链接。 / No — it's a login-free, unguessable link.
- Q: 演示数据可以重置吗? / Can I reset the demo data?
可以, 在历史页点「重置演示数据」, 种子收款人会自动恢复。 / Yes — Reset demo data on History; seed payees restore automatically.

本手册描述软件操作, 不构成法律或财务意见。资金结算以持牌机构执行结果为准。
This guide describes software usage and is not legal or financial advice. Settlement is governed by the licensed institution's execution.
